

Enterprise Operations Transformation for Today's Businesses

Enterprise operations management is undergoing a paradigm shift with the advent of new, disruptive, game-changing technologies. Future-focused organizations are moving away from ad hoc support and resource-based operations to services driven by automation and analytics.

These companies understand that to stay competitive and profitable, they must adopt innovative approaches that help them improve efficiency, optimize costs, reduce cycle times, and enhance the user experience.

At **Shree Partners**, our enterprise operations and transformation services help clients drive change through data centers, cloud migration, workplace transformation, network modernization, improved security and safety, and systems integration.

Our extensive knowledge of infrastructures, applications and analytics helps you monitor key trends and performance indicators, improve enterprise-wide decision-making, and create a more integrated, adaptive organization. Most importantly, these transformations lead to enhanced ROI and profits.

Working Together to Solve Business Challenges

To help your business stay competitive and profitable, the Shree Partners team works closely with your organization to improve efficiencies, optimize costs, reduce cycle times, and enhance the overall user experience.

- **Infrastructure** – Enterprise infrastructure constitutes a huge piece of total company costs. We work with you to reduce costs – from capital expenses to operating expenses. We also help you improve business agility by implementing, managing and monitoring a standard business and IT architecture on legacy systems, cloud or hybrid models.
- **Operations** – Today’s businesses require optimum agility and efficiency to compete in this fast-paced digital ecosystem. We understand the interconnectedness between humans and technology, and leverage emerging technologies to provide future-proof, secure solutions that help you reach your goals.
- **Proof of Concept** – Our account team starts by developing a “proof of concept” for your unique vision; then we work closely with your internal constituents to identify shared goals, priorities, action steps and solutions that deliver the best solution for each use case.

Shree Partners Enterprise Operations Transformation Solutions

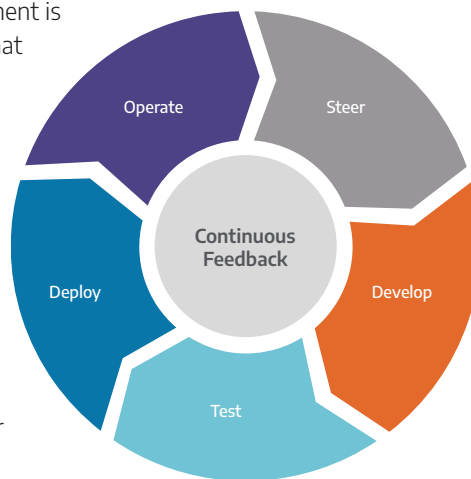

Data Center Operations

Heavy workloads of business-critical information require advanced enterprise storage solutions that offer the highest levels of data management, remote monitoring and security. Shree data center solutions support your critical requirements for data backup, storage, virtual desktop infrastructure (VDI) and server support. Our automated processes, dedicated support teams and global data centers ensure you'll benefit from the best enterprise storage, disaster recovery and data restoration solutions.

Shree data center operations manage and monitor your operations remotely; we can also track your operations, services and devices through advanced configurations that trigger alerts and notifications 24/7. Our support includes on-call rapid response to your critical requirements. Industry-leading backup and recovery tools ensure the highest levels of reliability when real-time data replication or disaster recovery is required. Additional support includes monitoring switches, firewalls, routers and VPNs to help you improve security, eliminate vulnerabilities, and block malware.

DevOps Consulting and Implementation

A client's biggest "ask" in project development is the ability to foresee potential problems that could arise during the project lifecycle. Development Operations (DevOps) combines software development (Dev) and information technology operations (Ops) to reduce the systems development lifecycle. Through our process of shared accountability between your organization and ours, DevOps enables us to develop and deploy solutions that address your key issues throughout the project lifecycle. Our solutions help you manage organizational change, collaborate more effectively, scale appropriately, and deliver value to your employees and customers.

Cloud Management

Transitioning your data to the cloud brings unparalleled benefits in scalability and cost savings. Shree's enterprise-grade solution removes the complexity around cloud migration, management and maintenance. Our end-to-end solution comes ready for deployment, and our expertise spans your entire cloud journey from initial assessment to dashboards and reporting. Our team works closely with you to integrate and deliver customized cloud service provider components that fit your requirements for storage, security, orchestration, networking and computing. Most importantly, you only pay for services used.

Cybersecurity and Threat Management

There are two types of assets – replaceable and irreplaceable. Because your data is irreplaceable, safeguarding your information, systems and reputation is non-negotiable. Shree Partners offers the highest levels of cybersecurity expertise to help you protect your data. Our risk management solutions help you safely monitor and manage critical security systems so you can focus on your core business.

Our processes utilize a combined human-centric, technology-centric and risk-adaptive approach. This approach delivers targeted solutions that ensure continuous, automatic monitoring of your organization while providing end-to-end transparency and visibility.

Network Operations Centers

Keeping your business running smoothly is essential for optimum productivity, profitability and peace of mind. Network operations centers (NOC) offer real-time, 24/7 monitoring to help you troubleshoot incidents, manage workflows, detect and address critical events. Having a sound infrastructure management program in place delivers continuous, remote monitoring for your mission-critical operations.

At Shree Partners, our dedicated NOCs constantly monitor threshold levels using tools that trigger alerts to dedicated dashboards. Remote monitoring helps us map incidents of every conceivable nature: CPU, RAM, routers, uninterruptible power supplies (UPS), temperatures in remote server locations, battery performance – and more. Infrastructure management services ultimately save you money by protecting your organization from unforeseen events that could adversely impact your bottom line.

Key Benefits

- **Data center operations** – Ensure business continuity with guaranteed SLAs; provide high-speed recovery to restore operations; offer dashboard-based management; provide 24/7 support through remote monitoring and on-call support.
- **DevOps consulting and implementation** – Ensure cross-functional transparency across teams; streamline processes and communication; automate business processes and reduce costs.
- **Cloud management** – Foster greater stakeholder collaboration and productivity; offer “always on,” 24/7 availability; reduce down-time during operational incidents; improve document control; offer unparalleled flexibility and reduce costs for improved cash flow.
- **Cybersecurity and threat management** – Safeguard your organization from cyberattacks, insider threats, security vulnerabilities and other risks; monitor and protect your data and systems 24/7; protect your bottom line.
- **Network operations centers** – Reduce operating costs; save on time and labor; improve security; reduce down-time; handle incidents immediately; protect your organization from network attacks; gain peace of mind with 24/7 monitoring and support.
